# Developed by Dermatologists

Recapture a more youthful looking appearance with dermatologist-developed Revitalight® skin care treatments

*Now you can safely and gradually alleviate your skin's signs of aging by enjoying a Revitalight® skin care treatment by your skin care professional.*

## What is the Revitalight® Skin Care System?

Developed by dermatologists who knew the average person did not need an invasive, sometimes painful procedure to minimize the signs of aging, Revitalight® incorporates a unique photopulsation technology. Photopulsation uses light-emitting diodes, or LEDs similar to those that illuminate alarm clocks and VCRs, and a micro massager as the basis of a revolutionary skin care system for skin care professionals. The frequency and duration of the LEDs in the photopulsation process are the keys to Revitalight®'s safe and effective light technology that gradually helps alleviate the signs of aging.

## Is Revitalight® affordable?

The cost of a Revitalight® Skin Care treatment is very affordable. Check with your skin care professional for the exact cost.

## What areas can be treated?

The Revitalight® treatment is especially effective in helping to improve the appearance of the skin on your face, neck, chest, and hands.

## What results can I expect?

Your skin will appear smoother, tighter, and more radiant, showing continued gradual improvements in your skin's appearance with each subsequent treatment. We recommend that you take a photograph of yourself before your first treatment, and after your sixth.

## What does a Revitalight® treatment consist of?

Each relaxing treatment takes approximately 20 minutes. Beginning with a cleaned face, a trained professional will slowly move the large pulsator light over your neck and face. To further improve the appearance of your skin, the small pulsator light will concentrate on your Revitalight® treatment.

## How many treatments will I need?

A series of six treatments with a one to two week interval between each treatment is recommended. After each treatment you should notice an improvement in the appearance of your skin. To maintain the results of the Revitalight® treatments, one treatment every two months is recommended.

# beSkin Smart

Now there's an alternative to other skin treatments...

Smiling, frowning, or sun exposure can emphasize fine lines, wrinkles, and age spots on your skin. Do you have to live with them? Not anymore.

The Revitalight® Skin Care System is the most advanced skin care technology available today. It is non-invasive, gentle and effective cosmetic skin treatment easily performed by your skin care professional. Because Revitalight® uses an innovative, safe photopulsation light technology, you can improve the appearance of your skin easily and painlessly. And you'll be surprised at how affordable a Revitalight® skin care treatment is.

A skin care program of Revitalight® treatments will improve the clarity and smoothness of most types of skin, while minimizing the appearance of fine lines, wrinkles, and age spots. The Revitalight® Skin Care System is recommended by dermatologists.

# the Revitalight® Skin Care System
